Professional Summary

Software Engineering-focused B.Tech Computer Science student graduating in June 2027 with hands-on experience building full-stack applications, REST APIs, database-backed systems, and cloud deployments. Skilled in Java, JavaScript, Python, C++, Node.js, Express.js, React.js, Next.js, SQL/NoSQL databases, AWS, Docker, and CI/CD. Strong foundation in Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, System Design, SDLC, and Agile software development.

Education

Sarala Birla University

Bachelor of Technology – Computer Science Engineering; CGPA: 8.57/10

Ranchi, Jharkhand, India

July 2023 – June 2027 (Expected)

Technical Skills

Languages: Java, C++, JavaScript, Python, SQL

Backend: Node.js, Express.js, REST APIs, JWT Authentication, RBAC, Socket.io

Frontend: React.js, Next.js, Tailwind CSS

Databases: MongoDB, PostgreSQL, MySQL, Redis, Supabase

Cloud & DevOps: AWS (EC2, S3, RDS, VPC, IAM, ALB, CloudWatch), Docker, Kubernetes, Jenkins, GitHub Actions, Ansible, Linux

Testing & Tools: Git, GitHub, Postman, Jest, Supertest, SonarQube, Nexus Repository, Apache Tomcat

Core Computer Science: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, System Design, SDLC, Agile Development

Experience

Unwrite Studio

Web Developer Intern

Hybrid

Nov 2025 – Jan 2026

- Developed and deployed customer-facing e-commerce application features using **Next.js** and **Supabase**, following maintainable software development practices.
- Implemented **authentication, product management workflows, API integrations, and database operations** to support core application functionality.
- Optimized API interactions and data-fetching workflows to improve application responsiveness and reduce unnecessary backend operations.
- Worked with **Git-based development, debugging, code reviews, issue resolution, and iterative Agile development** in a collaborative engineering environment.

Projects

GroceCart – Full-Stack Grocery Delivery Platform

GitHub

- Developed a full-stack grocery delivery platform with **React.js, Node.js, Express.js, and MongoDB**, implementing user authentication, product browsing, cart management, and order placement.
- Built secure **REST APIs** with JWT authentication and **role-based access control (RBAC)** for customers, administrators, and delivery personnel.
- Implemented **Socket.io WebSockets** for real-time order and delivery-status updates between customers and delivery personnel.
- Optimized backend workflows and database interactions to improve application responsiveness and maintainability.

College Discovery Platform

GitHub

- Built a production-ready college discovery platform enabling students to search, compare, and explore engineering colleges using detailed profiles, courses, placements, and student reviews.
- Implemented **JWT authentication, wishlist management, advanced filtering, and RESTful APIs** using a scalable MERN architecture.
- Optimized backend performance using **Redis caching** and efficient **MongoDB queries**, improving data retrieval for frequently accessed information.
- Containerized the application using **Docker** and followed modular backend development practices for maintainability and scalability.

Three-Tier AWS Application Architecture

AWS & Cloud Infrastructure

- Designed and deployed a scalable three-tier architecture using **AWS EC2, RDS, S3, VPC, IAM, and Application Load Balancer**.
- Configured VPC networking, subnets, route tables, security groups, and traffic distribution for secure and highly available application deployment.
- Integrated **GitHub Actions CI/CD** to automate application build and deployment workflows on Linux-based AWS infrastructure.
- Configured managed database services, backups, health checks, and monitoring to improve operational reliability and resource utilization.

Automated CI/CD Pipeline – Java Application

Jenkins, AWS & DevOps

- Built an automated CI/CD pipeline using **Jenkins** and Maven to checkout, build, test, package, and deploy Java applications.
- Integrated **SonarQube** for automated code-quality analysis and **Nexus Repository** for build artifact management.
- Deployed Java applications to **Apache Tomcat on AWS EC2**, automating software delivery and reducing manual deployment steps.

Achievements

- **LeetCode:** Solved 900+ problems, demonstrating strong problem-solving and Data Structures & Algorithms skills.
- **Flipkart GRID 8.0:** Reached Round 2 after clearing the initial screening rounds.
- **Adobe University Hackathon 2026:** Cleared Round 1 and advanced to the next stage.
